

## Kyle Spiegel

1. Number of Parameters TwitterClient
2. Create a single ArrayList parameter which gets is full of all the parameters, or an inheritance
3. Yes
4. 3 paths one for it being given **long** initialMillis, **long** capMillis as parameters. One for backOffMillis equaling 0 and one for it not equaling 0
5. Afferent is that a package's responsibility is indicated by determining the number of other packages that depend on parts of the package. Efferent is that a package's independence is indicated by the number of other packages that the classes within the package depend upon. These couplings can be used to determine coupling within the project.
6.  $(53+753)/(154 + 928) = 74.5\%$
7.  $(3+65+693)/(((154+928)-806)+948) = 62.1\%$
